

In the submission of the Director  
Approved For Release 2005/04/22 : CIA-RDP85B00803R000100080031-2

Fiscal Years 1971-75 in answer to the Combined Program Call,  
101/  
in March 1969, the DD/S&T reported on significant progress  
and accomplishments by the Directorate, highlighting the  
following projects:

NRO review(s) completed.

Combined  
101/ DD/S&T/Program, FY 1971 - FY 1975,

1 Mar 1969,

25X1

25X1

Mr. Duckett noted that the accomplishments in the above-

listed projects were the results of groundwork laid months and years earlier when the ideas and proposals were put forward and said that

by the various Offices. The continuation of an orderly RD&E program of concept, study, developing, testing, operation

and improvement in [redacted] the Directorate's ILLEGIB

ILLEGIB

[redacted] activities

was necessary in order to ensure continuing success in the future.

ILLEGIB

[redacted]  
Plans for the period for the automatic data processing program services provided by the Office of Computer Services

One area of the DD/S&T Program which caused concern to Mr. Duckett was the automatic data processing service furnished by OCS. He noted that demands for these services by elements outside the DD/S&T were quite expensive and were being furnished free. He envisaged the possibility of making a charge for these services, and further indicated his intention to resist the fulfilling of "operational" demands which required the unrealistic provision of computers and backup equipment.

He anticipated continuous growth of automatic data processing in the Agency and the Intel Community (an 11% growth had already occurred between 1964-68), but felt that ADP support should be treated by Agency management as something other than a free good.

Mr. Duckett ~~noted~~ noted a downward trend in funding R & D and ~~expressing~~ ~~marking~~ the opinion, ~~which~~ which was bolstered by that of outside observers, that the Agency RD&E budget was too small in relation to the total Agency budget. While he was unable to determine with precision the magnitude of R&D for any given

year, he felt there should be a source of funds (other than the Reserve) for exploratory research and development. His plan was to develop at least one "way-out" project (such as a totally invisible collection scheme) each year with the prospect of funding. ~~Approved For Release 2005/04/22 : CIA-RDP85B00803R000100080031-2~~

It was believed clearly necessary to plan/for increased<sup>also</sup>  
to be

~~xxx~~resources/provided for the production of intelligence.

Emphasis had in the past been on Soviet and Chinese Communist  
science and technology to the virtual exclusion of other areas.

It could be expected that more and more requirements would  
begin to arise for coverage of these other areas with emerging  
strategic threat potential.
